

Do batteries rank better than other brands?

Ranking brands is different from ranking batteries, of course, and it turns out to be a lot more complicated. You cannot necessarily trust that every battery made by one brand is automatically better than every comparable battery from any other given brand.

How hard is a battery test?

The tests are tough by design. We charge and discharge the batteries thousands of times while in a 167°F water bath to simulate underhood temperatures and find out how long they'll last.

Are aftermarket batteries better than original batteries?

As battery chemistries improve, newer devices include better batteries. In our experience, that aftermarket battery may be just as good as the original battery that came in your machine. Some aftermarket batteries are higher in capacity than the original components, since lithium ion batteries have improved--however slightly--over time.

Should you buy a car battery?

Car battery shopping has to be one of the least exciting parts about owning a car. Usually, it comes after several attempts at starting the vehicle, or after you had to call AAA to jump a dead battery. Sometimes it's a bad cell, sometimes the battery keeps dying, and sometimes the battery is just ready to be replaced.

Are alkaline batteries good?

The middle of the pack, especially with regard to alkaline batteries, is often perfectly acceptable. Eveready's alkaline Gold received mid-range scores from PowerStream, but CinemaSound found its cost per hour to be pretty good, and New Zealand's Consumer site actually recommended the battery based on acceptable performance and energy scores.

How long should a battery last?

Batteries lose strength over time, even when in storage. For optimum performance, purchase one that is less than 6 months old. Three months is even better. Most have a shipping code on the case, as explained above. A battery's toxic lead and acid can easily be recycled, and most retailers will dispose of the old one for you.
