

How much does air freight cost?

Unfortunately the reality is that logistics is still heavily impacted by outbreaks at ports and a reduced number of flights. Prior to the pandemic, air freight rates were available for around US\$ 7.00/kg during peak season (heavy shipping volume), and around \$US 4.00 during slow season (significantly less shipping volume).

How do I calculate the cost of air freight?

Several factors go into calculating the cost of air freight, including the weight and dimensions of your shipment, the origin and destination, and the type of aircraft being used. Our air freight calculator will consider all of these factors and provide you with an estimate of the cost of shipping your goods by air.

Can lithium ion batteries be shipped by air?

Specific transportation methods, particularly air freight, impose restrictions on shipping lithium batteries by air. Regulations often restrict the total weight and dimensions of packages containing lithium-ion batteries. Specific labels, such as the UN identification number and "Lithium Ion Battery" marking, are mandatory for air shipments.

Why is air freight more expensive than other modes of Transportation?

Air freight is generally more expensive than other modes of transportation, but it offers many advantages in terms of speed and reliability. When shipping by air, you will need to factor in the cost of the aircraft fuel and the fees charged by the airport and air traffic control.
