

What is energy storage charging pile equipment?

Design of Energy Storage Charging Pile Equipment The main function of the control device of the energy storage charging pile is to facilitate the user to charge the electric vehicle and to charge the energy storage battery as far as possible when the electricity price is at the valley period.

How does the energy storage charging pile interact with the battery management system?

On the one hand, the energy storage charging pile interacts with the battery management system through the CAN bus to manage the whole process of charging.

What is the energy storage charging pile system for EV?

The new energy storage charging pile system for EV is mainly composed of two parts: a power regulation system and a charge and discharge control system. The power regulation system is the energy transmission link between the power grid, the energy storage battery pack, and the battery pack of the EV.

How do I control the energy storage charging pile device?

The user can control the energy storage charging pile device through the mobile terminal and the Web client, and the instructions are sent to the energy storage charging pile device via the NB network. The cloud server provides services for three types of clients.

What is the processing time of energy storage charging pile equipment?

Due to the urgency of transaction processing of energy storage charging pile equipment, the processing time of the system should reach a millisecond level.

3.3. Overall Design of the System

What data is collected by a charging pile?

The data collected by the charging pile mainly include the ambient temperature and humidity, GPS information of the location of the charging pile, charging voltage and current, user information, vehicle battery information, and driving conditions. The network layer is the Internet, the mobile Internet, and the Internet of Things.

On June 7-9, NAAS (NASDAQ: NAAS) attended the 2nd Shanghai International Charging Pile and Battery Swapping Station Exhibition 2023 (CPSE 2023) and demonstrate its ...

The Company launched several new products at the Conference, including the semi-solid flow battery with a capacity density of 360Wh/kg, the JTM+ Gotion power exchange technology named Leishi and the EPLUS intelligent mobile energy storage charging pile. Semi-solid-state batteries will be loaded this year. For models equipped with semi-solid ...

From May 27 to 28, Gotion High-Tech, a renowned manufacturer of power batteries in China, convened its 11th Technology Conference. The Company launched several new products at the Conference, including the semi-solid flow battery with a capacity density of 360Wh/kg, the JTM+ Gotion power exchange technology named Leishi and the EPLUS intelligent mobile energy ...

As one of the new infrastructures, charging piles for new energy vehicles are different from the traditional charging piles. The "new" here means new digital technology which is an organic integration between charging piles ...

The energy storage charging pile achieved energy storage benefits through charging during off-peak periods and discharging during peak periods, with benefits ranging from 646.74 to 2239.62 yuan. At an average demand of 90 % battery capacity, with 50-200 electric vehicles, the cost optimization decreased by 16.83%-24.2 % before and after ...

As one of the new infrastructures, charging piles for new energy vehicles are different from the traditional charging piles. The "new" here means new digital technology which is an organic integration between charging piles and communication, cloud computing, intelligent power grid and IoV technology. The construction purpose of the new ...

In this paper, the battery energy storage technology is applied to the traditional EV (electric vehicle) charging piles to build a new EV charging pile with integrated charging, discharging, and storage; Multisim software is used to build an EV charging model in order to simulate the charge control guidance module. On this basis, combined with ...

The Company launched several new products at the Conference, including the semi-solid flow battery with a capacity density of 360Wh/kg, the JTM+ Gotion power exchange technology named Leishi and the EPLUS intelligent mobile energy storage charging pile. The semi-solid flow battery will be loaded this year. For models equipped with semi-solid ...
