In response to the issues arising from the disordered charging and discharging behavior of electric vehicle energy storage Charging piles, as well as the dynamic characteristics of electric vehicles, we have developed an ordered charging and discharging optimization scheduling strategy for energy storage Charging piles considering time-of-use electricity ...

Fig. 13 compares the evolution of the energy storage rate during the first charging phase. The energy storage rate q_{sto} per unit pile length is calculated using the equation below : (3) $q_{sto} = \frac{m \cdot c_w \cdot (T_{in\ pile} - T_{out\ pile})}{L}$ where m is the mass flowrate of the circulating water; c_w is the specific heat capacity of water; L is the length of energy pile; $T_{in\ pile}$ and $T_{out\ pile}$...
