

Explore our global installed capacity tool. It allows you to break down the cumulative installed capacity data by year, by technology, by country and region. The data include the historic installation capacity, net yearly changes, short-term and...

The global energy storage market almost tripled in 2023, the largest year-on-year gain on record. Growth is set against the backdrop of the lowest-ever prices, especially in China where turnkey energy storage system ...

According to the research by Bloomberg, the global installed energy storage capacity additions are expected to hit a record in 2023, with 42GW/99GWh. And is expected to grow at a CAGR of...

Global installed storage capacity is forecast to expand by 56% in the next five years to reach over 270 GW by 2026. The main driver is the increasing need for system flexibility and storage around the world to fully utilise and integrate larger shares of variable renewable energy (VRE) into power systems.

BNEF estimates that energy storage capacity worldwide needs to grow by a factor of 16.1 times from the end of 2022, to 720 gigawatts by 2030, to support a global target to triple renewables that is under discussion ahead of COP28.

Out to 2030, the global energy storage market is bolstered by an annual growth rate of 21% to 137GW/442GWh by 2030, according to BloombergNEF forecasts. In the same period, global solar and wind markets are expected to see compound annual growth rates of 9% and 7%, respectively.

Global household electricity prices 2023, by select country ... Premium Statistic Global installed base of energy storage projects 2017-2022, ... Forecast energy storage capacity in the EU 2022 ...

GW = gigawatts; PV = photovoltaics; STEPS = Stated Policies Scenario; NZE = Net Zero Emissions by 2050 Scenario. Other storage includes compressed air energy storage, flywheel and thermal storage. Hydrogen electrolyzers are not included.
