A Nickel-iron battery is a rechargeable battery used for storing electric power. A Nickel-Iron (NiFe) battery contains nickel hydroxide and iron plates. The nickel (III) plates have a positive charge, and the iron plates have a negative. Each cell of this battery gives about 1.2 V of nominal voltage.

Battery costs vary by model, but including labor, the cost to replace the battery in a used BEV generally costs about the same as that used BEV on the market. In other words, the vehicle would be a financial loss if the battery required replacement. One may as well scrap the vehicle and simply buy the same year, make, and model used with a working battery. We ...
