Perfect for removing the nickel strip that is attached to cells when salvaging.

How do you rebuild a battery pack?

Rebuild a battery pack by replacing individual batteries that have failed. Low voltage battery packs were popular 10 years ago. Unlatch the battery pack and separate it from the power tool. Remove the small screws around the perimeter of the battery pack case with a small screw driver, and separate the two sections.

How do you remove a battery pack from a power tool?

Unlatch the battery pack and separate it from the power tool. Remove the small screws around the perimeter of the battery pack case with a small screw driver, and separate the two sections. Unsolder the two wires that are attached to the positive and negative electrodes of the battery pack's terminal plug.

How to reassemble a lithium battery pack?

The following steps should be followed in order to reassemble the battery pack correctly: Ensure that all components of the lithium battery pack are present, including cells, wires, terminals, and case cover. Assemble the cells into their respective terminal connections.

How do I fix a bad battery pack?

First, you need to figure out what's wrong with the pack--either bad cells or a wonky Battery Management System (BMS). If it's the BMS, just swap it out with a new one. The BMS keeps an eye on the battery pack's performance and makes sure everything's working within safe limits. Replace the bad BMS, and your battery pack should be good to go.

How do you unsolder a battery pack?

Unsolder the two wires that are attached to the positive and negative electrodes of the battery pack's terminal plug. The terminal plug is identified by the two metal strips that slide in and make contact to power the tool.
