

How to use a Sun Shower bag?

The heat reflects off of the black material on the inside of the sun shower, hence heating the water. (Therefore, you want to lay the shower bag flat with the silver side down.) As the water warms up, the built-in temperature gauge on the bag will display the rising water temperature. First of all, unscrew the top valve and fill the bag with water.

How do you heat a water bag?

For heating your bag correctly, it is best to place it over a rock. You can also set the bag on the ground's top to ensure that it is quite warm. It's ideal for accumulating solar energy once the sun is shining completely, which is frequently in the early afternoon. Then, the bag can heat the water rapidly.

How does a Sun Shower bag work?

In actuality, the back of the bag features a transparent PVC that allows the sunlight to shine through. The heat reflects off of the black material on the inside of the sun shower, hence heating the water. (Therefore, you want to lay the shower bag flat with the silver side down.)

Are Coleman solar shower bags the same as Stearns?

Coleman also makes their own solar shower bag, plus a sun shower under the Stearns brand. They have almost the identical design and features. However, the Coleman has a 5-gallon capacity, while the Stearns only has 4. Besides the pouch capacity, the toiletry pocket and the temperature gauge, these sun showers are virtually identical.

What color is a Sun Shower bag?

As you can see, the front side has a reflective silver color, while the back side looks black. In actuality, the back of the bag features a transparent PVC that allows the sunlight to shine through. The heat reflects off of the black material on the inside of the sun shower, hence heating the water.

How does a batch solar collector work?

As the tank is emptied, more cold water flows in and continues to be heated by the Sun. Batch solar collectors work best during the summer months, because the Sun is out longer during the day and it doesn't get too cold. The Sun's energy is both free and renewable, meaning it can be used over and over again and it never runs out.

However, it can be equally helpful to use the solar pool cover during the day when the solar pool cover can use the sun to heat your pool further. The one exception to this rule would be using a liquid solar cover. Liquid solar covers can be used even when swimming. [How to Install and Use Your Solar Pool Cover](#)
