

Should you go solar when building a new home?

If you're thinking about going solar, there's no better time than during the design process for your new home. When you incorporate solar into your new home's construction, you take advantage of solar's environmental and financial benefits without having to retrofit your home with a solar installation later down the road.

How much does home solar cost?

The average pre-incentive cost of home solar is \$29,161 for a three-bedroom house, or \$20,412 after claiming the 30% tax credit. However, as shown in the chart below, the number of bedrooms isn't a great indicator of the size and cost of a solar system - and neither is living space, for that matter.

Is home solar a good idea?

Home solar isn't the only way to go solar. If you're a renter, you could save 5-20% on annual electricity costs by signing up for community solar. Or, you could encourage your business to install solar panels, saving it hundreds of thousands of dollars on overhead costs. Are you a good fit for home solar?

How does solar energy affect your home?

Heating and cooling: If you use electricity to heat and cool your home, your heating and cooling needs will significantly affect the amount of solar energy you need. Weatherizing your home and heating and cooling efficiently will reduce the amount of electricity you need to produce with solar.

Can you buy a solar energy system with a mortgage?

New homeowners can add solar as part of their mortgage with loans available through the Federal Housing Administration Fannie Mae, which allow borrowers to include financing for home improvements in the home's purchase price. Buying a solar energy system makes you eligible for the Solar Investment Tax Credit, or ITC.

Who owns a solar energy system?

The system can be on- or off-site and may be owned by utilities, a solar developer, non-profit entities, or multiple community members. If you lease a solar energy system, you are able to use the power it produces, but someone else--a third party--owns the PV system equipment. The consumer then pays to lease the equipment.

You may be considering the option of adding a solar energy system to your home's roof or finding another way to harness the sun's energy. While there is not a universal solar energy solution, in this guide you will find some resources that can help you decide what's best for you. Consider these questions before you go solar.

Solar technology is revolutionizing the way homes are built and operated. By harnessing the power of the sun, homeowners can enjoy a range of benefits, both for the environment and their wallets. In this section, we will explore the advantages of incorporating solar technology into new homes.

Today's premium monocrystalline solar panels typically cost between \$1 and \$1.50 per Watt, putting the price of a single 400-watt solar panel between \$400 and \$600, depending on how you buy it. Less efficient polycrystalline panels are typically cheaper at \$0.75 per watt, putting the price of a 400-watt panel at \$300.

Today's premium monocrystalline solar panels typically cost between \$1 and \$1.50 per Watt, putting the price of a single 400-watt solar panel between \$400 and \$600, depending on how ...
