Lead Acid batteries are used in variety of technologies. Mr Positive is a NZ retailer and stockist of all major Lead Acid battery technologies. Whether it's for automotive,mobility,UPS,alarm or marine application. Mr Positive uses registered specialised hazard couriers to ship certain lead acid batteries around NZ.

What is a sealed lead acid battery?

These versatile Sealed Lead Acid batteries have a huge range of uses and are often found in alarm systems, NBN installations, and other critical systems such as Uninterruptable Power Supplies. For More info on Charging Batteries. Maximise the service life of a deep-cycle battery by recharging it smarter, not harder

What is a lead-acid battery?

Lead-acid batteries for automotive use are made with slightly different construction techniques, depending on the application of the battery. The "flooded cell" type, indicating liquid electrolyte, is typically inexpensive and long-lasting, but requires more maintenance and can spill or leak.

How long does it take to ship a lead acid battery?

Mr Positive uses registered specialised hazard couriers to ship certain lead acid batteries around NZ. Shipping of this product range requires extreme care. Generally items are shipped the same day an order payment is confirmed. Due to the nature of the product and volatile chemicals,the transit time may take 2-5 daysdepending on your location.

What is a SLA battery?

SLA (Sealed Lead Acid) batteries otherwise known as VRLA (Valve Regulated Lead Acid) were originally known as "Dry Batteries". They were introduced in the 1950's and at that time,the only sealed battery utilised a Gel electrolyte. The otherwise free acid was immobilised with a fine silica powder and formed a gel substance.

Lead-acid batteries for automotive use are made with slightly different construction techniques, depending on the application of the battery. The "flooded cell" type, indicating liquid electrolyte, is typically inexpensive and long-lasting, but requires more maintenance and can spill or leak.
