If your Windows laptop battery icon shows that it is charging when it is not plugged in at all, your laptop battery or drivers might be faulty. Use these fixes to resolve the issue.

SOLAR PRO.

6 ???· You can try to reset Windows power options to see if it will change: what you need to do: Open the Device Manager by searching for it or right-clicking the Start button and selecting Device Manager. Click Batteries on the list to expand it and you should see two items: Microsoft AC Adapter and Microsoft ACPI-Compliant Control Method Battery.

It"s battery indicator is showing it"s in charging status even when it is NOT plugged in to a power adapter. The battery itself seems to be ok as it is draining normally during usage and gets charged up when I plugged it in for charging.

1: ??:?????????????????/??/???? /sys/class/power_supply/battery/status ??????,--> Charging ??????--> Full ? ...

You need to divide the value by 10,000 to get the charging current in Amps. To get the charging power (in Watts) you multiply the current (in Amps) by the voltage, which is almost certainly going to always be 20V. In my case: (9566 / 10,000) * 20V = 19.1W. This validated by measuring the charging rate using my Firsi USb power meter.

When you plug in any laptop to a charger, the battery icon on the system tray will change, indicating that the battery is charging. But when you hover or click on the icon, it says "Plugged in not Charging." Some Lenovo laptops have Conservation mode enabled.
