

# Safety regulations for energy storage products

Do energy storage sites have different safety codes and standards?

Yes, different safety installation codes and standards are used for energy storage sites with large utility-owned systems where the inverters and batteries are housed in separate locations and the entire project is often far from other buildings. For instance, the 1,600-MWh setup at Moss Landing in California follows these specific codes and standards.

Does industry need energy storage standards?

As cited in the DOE OE ES Program Plan, "Industry requires specifications of standards for characterizing the performance of energy storage under grid conditions and for modeling behavior. Discussions with industry professionals indicate a significant need for standards ..." [1, p. 30].

What if the energy storage system and component standards are not identified?

Table 3.1. Energy Storage System and Component Standards 2. If relevant testing standards are not identified, it is possible they are under development by an SDO or by a third-party testing entity that plans to use them to conduct tests until a formal standard has been developed and approved by an SDO.

What is the energy storage safety strategic plan?

Under the Energy Storage Safety Strategic Plan, developed with the support of the Department of Energy's Office of Electricity Delivery and Energy Reliability Energy Storage Program by Pacific Northwest Laboratory and Sandia National Laboratories, an Energy Storage Safety initiative has been underway since July 2015.

Are large-scale energy storage systems safe?

Large-scale energy storage systems pose a greater risk for property and life loss than smaller systems due to their size. NFPA 855 requires 3 ft of space between every 50 kWh of energy storage for safety. However, the Authority Having Jurisdiction (AHJ) can approve closer proximities for larger storage systems based on thermal runaway test results from UL 9540A.

What safety standards affect the design and installation of ESS?

As shown in Fig. 3, many safety C&S affect the design and installation of ESS. One of the key product standards that covers the full system is the UL9540 Standard for Safety: Energy Storage Systems and Equipment. Here, we discuss this standard in detail; some of the remaining challenges are discussed in the next section.

safety in energy storage systems. At the workshop, an overarching driving force was identified that impacts all aspects of documenting and validating safety in energy storage; deployment of energy storage systems is ahead of the codes, standards and regulations (CSRs) needed to appropriately regulate deployment. To address

# Safety regulations for energy storage products

this

In North America, the safety standard for energy storage systems intended to store energy from grid, renewable, or other power sources and related power conversion equipment is ANSI/CAN/UL 9540. It was created to ensure ...

The ESIC is a forum convened by EPRI in which electric utilities guide a discussion with energy storage developers, government organizations, and other stakeholders to facilitate the development of safe, reliable, and cost-effective energy storage options for the utility industry.

Global Deployment of Energy Storage Systems is Accelerating Battery System and Component Design/Materials Impact Safety Potential Hazards and Risks of Energy Storage Systems

Provides guidance on the design, construction, testing, maintenance, and operation of thermal energy storage systems, including but not limited to phase change materials and solid-state energy storage media, giving manufacturers, ...

UL 9540 - Standard for Safety of Energy Storage Systems and Equipment In order to have a UL 9540-listed energy storage system (ESS), the system must use a UL 1741-certified inverter and UL 1973-certified battery packs ...

One of the key product standards that covers the full system is the UL9540 Standard for Safety: Energy Storage Systems and Equipment . Here, we discuss this standard in detail; some of the remaining challenges are discussed in the next section.

UL 9540 - Standard for Safety of Energy Storage Systems and Equipment In order to have a UL 9540-listed energy storage system (ESS), the system must use a UL 1741-certified inverter and UL 1973-certified battery ...
