

How much does a lead acid battery system cost?

A lead acid battery system may cost hundreds or thousands of dollars less than a similarly-sized lithium-ion setup - lithium-ion batteries currently cost anywhere from \$5,000 to \$15,000 including installation, and this range can go higher or lower depending on the size of system you need.

How is a lithium ion compared to a lead-acid battery?

The costs of delivery and installation are calculated on a volume ratio of 6:1 for Lithium system compared to a lead-acid system. This assessment is based on the fact that the lithium-ion has an energy density of 3.5 times Lead-Acid and a discharge rate of 100% compared to 50% for AGM batteries.

Should you use a lead acid or lithium ion battery?

If you need a battery backup system, both lead acid and lithium-ion batteries can be effective options. However, it's usually the right decision to install a lithium-ion battery given the many advantages of the technology - longer lifetime, higher efficiencies, and higher energy density.

Can a lead acid battery be discharged past 50 percent?

While it is normal to use 85 percent or more of a lithium-ion battery's total capacity in a single cycle, lead acid batteries should not be discharged past roughly 50 percent, as doing so negatively impacts the battery's lifetime.

Are lithium-based solutions cheaper than lead-acid solutions?

In summary, the total cost of ownership per usable kWh is about 2.8 times cheaper for a lithium-based solution than for a lead acid solution. We note that despite the higher facial cost of Lithium technology, the cost per stored and supplied kWh remains much lower than for Lead-Acid technology.
