

Focus areas: research and development and production of automotive batteries and energy storage systems.? Test equipment: with complete MES, EOL, ?1500V aging test cabinet, tension test, air tightness tester, insulation voltage resistance, balance and other testing equipment.? Launch scale: self-developed energy storage system exceeds 500 MW, and vehicle battery ...

Based on the latest version of industry standard and national standard, PONOVO launched different testing solutions for EV and charging pile, which could finalize electrical performance ...

The largest battery laboratory in Switzerland for cell and module testing enables start-ups, SMEs or large companies to test their energy storage systems in a complete environment with the ...

Energy storage batteries require stringent leak detection for battery performance and battery safety and air tightness testing due to potential hazards and ...

ET500 is a high and low voltage compatible air tightness testing equipment that supports the sealing test of electric vehicle battery pack boxes and liquid cooling systems.

Bureau Veritas supports battery storage system manufacturers (BESS) with comprehensive regulatory compliance services. This ensures that your battery storage systems function properly at all times and meet legal requirements ...

The Swiss company GOFAST Ltd builds and operates the largest national fast charging network for electric vehicles. Fast charging is already available today at over 50 locations along major roads and at transit hubs. An additional range of up to 150 kilometres can be gained at a GOFAST charging station in just 10 minutes. Irrespective of the type of plug or charging ...

Energy storage batteries require stringent leak detection for battery performance and battery safety and air tightness testing due to potential hazards and degradation caused by leaks. Lithium-ion battery air tightness tests play a crucial role in ensuring long-term performance and durability.
