

The latest analysis report on China's energy storage industry

How did China's new energy storage industry develop in 2023?

China's new energy storage achieved leapfrog development in 2023, and also had the rapid growth of the new energy storage industry. The cumulative installation of global energy storage in 2023 In 2023, the cumulative installation of global energy storage was about 294.1GW.

How big is China's energy storage capacity?

According to incomplete statistics from CNESA DataLink Global Energy Storage Database, by the end of June 2023, the cumulative installed capacity of electrical energy storage projects commissioned in China was 70.2GW, with a year-on-year increase of 44%.

Is China's energy storage sector growing?

According to the report, China's energy storage sector has maintained a rapid growth momentum from 2023, with new energy storage capacity expanding from 8.7 million kilowatts in 2022 to 31.39 million kW last year. On the other hand, new energy storage plants in China are increasingly shifting toward centralized, large-scale installations, it said.

How big is China's energy storage in 2023?

In the first half of 2023, China's new energy storage continued to develop at a high speed, with 850 projects (including planning, under construction and commissioned projects), more than twice that of the same period last year. The newly commissioned scale is 8.0GW/16.7GWh, higher than the new scale level last year (7.3GW/15.9GWh).

How many new energy storage projects are commissioned in China?

Figure 2: Cumulative installed capacity of new energy storage projects commissioned in China (as of the end of June 2023) In the first half of 2023, China's new energy storage continued to develop at a high speed, with 850 projects (including planning, under construction and commissioned projects), more than twice that of the same period last year.

What will China's energy storage capacity be by 2030?

It is estimated that by 2030, the cumulative installed capacity of energy storage in China will be about 315GW, of which the cumulative installed capacity of new energy storage will be about 170GW, that of pumped storage will be about 140GW, and that of cold and heat storage will be about 5GW.

The IEA's Special Report on Batteries and Secure Energy Transitions highlights the key role batteries will play in fulfilling the recent 2030 commitments made by nearly 200 countries at COP28 to put the global energy system on the path to net zero emissions. These include tripling global renewable energy capacity, doubling the pace of energy efficiency ...

The latest analysis report on China's energy storage industry

It is estimated that by 2030, the cumulative installed capacity of energy storage in China will be about 315GW, of which the cumulative installed capacity of new energy ...

China is rapidly advancing in the field of energy storage, driven by both government support and market demand. The recent developments highlight the country's strategic focus on enhancing its energy storage capabilities ...

According to public industry data, newly installed capacity of energy storage projects in China soared to 16.5GW in 2022, of which installation of new energy storage projects hit a record high of 7.3GW/15.9GWh. The explosive growth of the energy storage market in China has contributed to favourable government policies and regulations. Our analysis of a series of government ...

The cumulative installation of cold and heat storage was about 930.7MW, a year-on-year increase of 69.6%, accounting for 1.1% of the total installed energy storage capacity. China's new energy storage capacity will be installed in 2023. In 2023, China's new installed capacity of energy storage was about 26.6GW.

It is estimated that by 2030, the cumulative installed capacity of energy storage in China will be about 315GW, of which the cumulative installed capacity of new energy storage will be about 170GW, that of pumped storage will be about 140GW, and that of cold and heat storage will be about 5GW.

According to the report, China's energy storage sector has maintained a rapid growth momentum from 2023, with new energy storage capacity expanding from 8.7 million kilowatts in 2022 to 31.39 million kW last year. On the other hand, new energy storage plants in China are increasingly shifting toward centralized, large-scale installations, it said.

The China energy storage market is poised for significant growth, driven by substantial investments in renewable energy projects and supportive government policies. The market is expected to experience a robust expansion, with the electrochemical storage segment, including lithium-ion and other battery systems, anticipated to lead the charge ...
