Ceramic capacitors consist of two or more alternating layers of ceramic material as the dielectric and metal layers acting as the non-polarized electrodes. Applications include automotive, bypass, decoupling, filtering, RF, and ESD protection.

Method of Finding the value/Meaning of codes of capacitor
o Ceramic disc capacitors have two to three digits code printed on them.
o The first two numbers describe the value of the capacitor and the third number is the number of zeros in the multiplier.
o When the first two numbers are multiplied with the multiplier, the resulting value is the value of the capacitor in picofarads.
