How a charging pile energy storage system can improve power supply and demand?

Charging pile energy storage system can improve the relationship between power supply and demand. Applying the characteristics of energy storage technology to the charging piles of electric vehicles and optimizing them in conjunction with the power grid can achieve the effect of peak-shaving and valley-filling,which can effectively cut costs.

Can battery energy storage technology be applied to EV charging piles?

In this paper, the battery energy storage technology is applied to the traditional EV (electric vehicle) charging piles to build a new EV charging pile with integrated charging, discharging, and storage; Multisim software is used to build an EV charging model in order to simulate the charge control guidance module.

What is the function of the control device of energy storage charging pile?

The main function of the control device of the energy storage charging pile is to facilitate the user to charge the electric vehicle and to charge the energy storage battery as far as possible when the electricity price is at the valley period. In this section,the energy storage charging pile device is designed as a whole.

How does a charging pile work?

The charging pile determines whether the power supply interface is fully connected with the charging pile by detecting the voltage of the detection point. Multisim software was used to build an EV charging model,and the process of output and detection of control guidance signal were simulated and verified.

Can energy storage reduce the discharge load of charging piles during peak hours?

Combining Figs. 10 and 11,it can be observed that,based on the cooperative effect of energy storage,in order to further reduce the discharge load of charging piles during peak hours,the optimized scheduling scheme transfers most of the controllable discharge load to the early morning period,thereby further reducing users' charging costs.

What data is collected by a charging pile?

The data collected by the charging pile mainly include the ambient temperature and humidity, GPS information of the location of the charging pile, charging voltage and current, user information, vehicle battery information, and driving conditions . The network layer is the Internet, the mobile Internet, and the Internet of Things.
